PROFESSIONAL SUMMARY

Payments leader with 7 years running merchant payment performance, local payment method launches, and payment partner management across Latin America, Sub-Saharan Africa, and Europe. Two years inside EBANX, the leading LATAM cross-border processor, improving authorization rates and managing chargeback and fraud exposure for international merchants entering Brazil and Mexico, including a fast fashion e-commerce account that grew to roughly \$300M in annual TPV. Four years co-founding a payments company powered by stablecoin rails, operating payout corridors on three continents, integrating 18 financial institutions across multiple jurisdictions and cutting processing costs by 40%. Fluent Portuguese and French. MSc Finance, Investment and Risk; MS Technology Commercialization, UT Austin.

SKILLS

Authorization Rate Optimization | Chargeback, Fraud, and Refund Monitoring | PSP and Payment Partner Management | Local and Alternative Payment Methods (installments, cards, bank transfer, mobile money) | Cost of Payments and Fee Negotiation | Risk and Compliance Coordination | Emerging Market Payment Ecosystems (LATAM, Sub-Saharan Africa) | Cross-Border Payments, Payouts, and FX | Stablecoin Settlement Rails | Commercial Negotiation and Contracts | Merchant Onboarding and Lifecycle

Tools: Tableau | SQL | DBeaver | HubSpot | JetAdmin | Excel

PAYMENTS EXPERIENCE

COO AND CO-FOUNDER 04/2021 to 03/2025

Betaramps, United Kingdom

- Built and operated cross-border payout rails reaching 31 countries across LATAM, Sub-Saharan Africa, and Europe, with Mexico and Brazil as core markets, live corridors in Senegal, Kenya, the UK, France, Norway, and Denmark, and EEA coverage via EUR rails; cut end-to-end processing costs by 40% and drove a 4x MoM increase in TPV.
- Sourced, negotiated, and integrated 18 financial institutions across multiple jurisdictions, including Circle and Bitso for stablecoin settlement and FX, and Yellow Card and AZA Finance for Sub-Saharan African corridors.
- Launched wallet infrastructure that replaced manual transfers, defining system requirements with engineering to automate 95% of transactions and scale the platform to \$1M annual TPV; when the third-party signing provider returned non-standardized API responses, led the in-house data normalization work rather than let a vendor gap block automation.
- Owned partner performance governance: queried transaction data in DBeaver and built KPI dashboards in JetAdmin to track success rates by corridor and provider, then reallocated volume toward higher-performing partners.
- Operated stablecoin settlement rails alongside traditional payout methods, managing FX exposure and liquidity across corridors.

SALES MANAGER 12/2020 to 05/2021

Cellulant, Kenya

- Sold e-commerce payment solutions into Sub-Saharan African markets where mobile money is the dominant rail, positioning card and bank collection alongside M-Pesa, MTN MoMo, and Orange Money coverage.
- Ran technical and commercial feasibility on a \$100M enterprise e-commerce opportunity, identifying critical gaps in FX pricing and settlement transparency in the Nigerian market.
- Proposed USDT/NGN liquidity structures to mitigate currency risk, and recommended against onboarding when pricing could not be made viable, protecting 3+ months of engineering bandwidth.
- Translated enterprise merchant requirements into structured product feedback on pricing transparency and local payment method coverage.

INDEPENDENT TRADER AND FOUNDER 03/2019 to 07/2020

Brazil

- Executed cryptocurrency arbitrage strategies across Brazilian exchanges, capturing pricing inefficiencies while managing FX, liquidity, and counterparty risk in a fragmented market.
- Co-founded a retail apparel venture and closed it after validating that the unit economics would not support scale.

SENIOR ACCOUNT MANAGER AND CUSTOMER SUCCESS 06/2018 to 03/2019

EBANX, Brazil

- Managed payment performance for a portfolio of international merchants processing in Brazil and Mexico, including a fast fashion e-commerce account that grew to roughly \$300M in annual TPV.
- Improved authorization rates by analyzing decline reasons at BIN and acquirer level, identifying card ranges with materially higher approval odds on specific acquirers, and working with Product to reroute traffic and adjust checkout flows without engineering rework.
- Monitored chargeback, fraud, and refund exposure against the 1% chargeback threshold; flagged unusual ticket sizes and transaction frequency, and coordinated with Compliance and merchants to assemble evidence for fraud disputes.
- Cut chargebacks arising from commercial disputes by persuading merchants to open self-serve refund paths inside their own support flows, resolving disputes before they ever became chargebacks.
- Architected a cross-border expansion workflow in HubSpot and Tableau using API triggers to automate country activation, reducing manual support tickets 67% in one quarter and lifting quarterly merchant expansion count 18%.

BUSINESS DEVELOPER 12/2016 to 06/2018

EBANX, Brazil

- Acquired 80+ international merchants across inbound, outbound, and referral channels, generating over \$30M in new processing volume within 18 months.
- Originated and closed a fast fashion e-commerce merchant entering Latin America; owned the Mexico launch end to end across qualification, commercial negotiation, compliance, integration, and go live, then supported the account team through the subsequent Brazil expansion.
- Led the integration of installment payments in Mexico, driving a 126% MoM increase in average order value.
- Co-developed go-to-market campaigns focused on Latin American payment localization across cards, installments, and local methods.

EDUCATION

MS, Technology Commercialization | University of Texas at Austin | 05/2026 | Honors Graduate, GPA 3.91
MSc, Finance, Investment and Risk | University of Kent, United Kingdom | 09/2016 | Distinction, GPA 3.7
